Scotland will be 'more susceptible' to zombie invasion under independence, claim Better Together.

Alex Salmond was yesterday accused of trying to lead Scotland into "the darkest day of horror known to man" after a report suggested being eaten alive by the undead would be more likely in an independent Scotland.

Unionist ministers leapt on the findings, snarling and foaming at the mouth, before ripping into the First Minister, demanding he reveal the SNP's zombie policy and outline any other catastrophes he was hiding from the Scottish public.

The findings of the report, commissioned by the Better Together campaign in conjunction with the coalition UK government, were discussed at a Scottish Affairs Committee in which several experts on disaster prevention were interrogated by Westminster MP's.

Professor Bub Romero, who was questioned for over 34 hours without a break, was asked to name any unique and potential scenarios that could more likely occur in the event of a 'yes' vote in the 2014 referendum. Looking very drowsy and slightly peckish, Professor Romero answered by lifting his arms, rolling his eyes back and growling:

"Braaaaaaaaaains."

The evidence was quickly spread across the Twittersphere and first revealed by Labour MP Jim Murphy who tweeted:

Just confirmed in Scottish affairs committee – an indy Scotland would be overrun by the undead. Disgraceful. #BetterTogether #Zombishambles

Stephen Fry, who has an opinion on everything according to lazy journalists, tweeted:

"As long as we ban pufferfish and triggerfish, which contain Tetrodotoxin – the toxin which produces zombies – from the UK we'll be fine."

Rio Ferdinand, who also has an opinion on everything according to lazy journalists, tweeted:

[Loch Ness Monster](#), [who are yet to provide clarity over the](#)
